Engineer

Administered 100 Bare Bone servers

Administered 100 Bare Bone servers, physical networks, and IP telephony systems, ensuring robust infrastructure for company growth.

2003 – 2014

100

bare-metal servers, networks and telephony run

Situation. Underneath everything the company did was the physical stuff — servers, the actual networks, the IP-telephony — and it all had to just run. That layer is invisible when it works and extremely visible the moment it doesn't, and the company's growth was resting on it staying dependable.

Task. Administering that infrastructure and keeping it stable as the company grew was the job.

Action. A hundred bare-bone servers, along with the physical networks and the IP-telephony systems, were looked after — the setup, the maintenance, the troubleshooting when something went wrong. Bare-bone servers mean dealing with the hardware directly, so there's a hands-on, physical side to it: the cabling, the boxes, the phone system that everyone notices the second a call drops. The job was to keep all of it boring, in the good sense.

Result. The servers, the networks and the telephony ran reliably, and that dependable physical foundation is what let the company keep growing without the ground shifting underneath it.

Bring this experience to your project

Use "Administered 100 Bare Bone servers" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Day-to-day care of servers, mail, accounts and updates, so the things everybody relies on stay boring.

Setting up on-prem servers and telephony?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: System Administrator / IT Consultant. It draws on Infrastructure, Reliability & Backups, Networking & VPN, Linux & Servers and System Administration. And while you are here, we are rather good at System Administration and Networking & VPN Setup.
