Engineer

Automated team collaboration

Automated team collaboration, password management, task and time management, and built a semi-automatic project-showcase system, raising team productivity.

2015 – 2022

collaboration, passwords and time, automated

Situation. A lot of the team's operational work — coordinating, managing passwords, tracking tasks and time — was being done by hand, and manual coordination is a quiet tax: it's never the thing you notice, but it steadily eats hours that could go somewhere better.

Task. Automating that repetitive operational work was the goal.

Action. The pieces that lent themselves to it got automated — team collaboration, password management, task management, time management — with a semi-automatic project-showcase system on top. The idea across all of it was to take the routine coordination off people's plates so it ran itself, and let them spend the recovered attention on work that actually needed a human. The showcase system was the same instinct applied to something more visible: make presenting the work mostly automatic rather than a manual chore each time.

Result. Operational efficiency went up and the team got more productive, because the routine coordination that used to need constant human attention now largely ran on its own. The time that was leaking into busywork went back into the actual work.

Bring this experience to your project

Use "Automated team collaboration" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Tested, released and reversible, so changes reach customers on a Tuesday afternoon rather than late on a Friday night.

Want your team's tools working as one?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: Process Automation Engineer. It draws on DevOps, Automation & CI/CD, Security, Technical Leadership and Project Management. And while you are here, we are rather good at DevOps & CI/CD Automation, Security & Access Management and Project Management (Agile).
