Engineer

Delivered analysis and regular progress reports

Delivered analysis and regular progress reports to the CEO, translating engineering KPIs and delivery status into decisions.

2025

engineering turned into decisions for the CEO

Situation. As the platform came together, its progress and its health had to be visible to leadership in terms they could actually do something with. Raw engineering signals — build status, delivery pace, incidents — don't mean much on their own to someone making product and investment calls; they're at the wrong altitude. Someone had to translate.

Task. That translation was the job: taking the engineering reality — where delivery stood, what the system metrics were saying — and reporting it to the CEO clearly and regularly, so decisions rested on facts instead of guesswork.

Action. A steady reporting rhythm went in, rather than reporting when asked, which is always a bit too late. Delivery progress, scope, risks and system health got tracked and turned into plain, decision-oriented updates — what's on track, what's at risk, and what a given priority would actually cost in trade-offs. The thing to avoid was handing over raw numbers and leaving the interpretation to someone without the context; each report came with concrete recommendations, and where it helped the narrative was backed with the underlying analysis, so leadership could drill in if they wanted rather than having to take it on trust.

Result. Leadership ended up with a clear, honest, current picture of the engineering, and could steer product priorities and investment with some confidence instead of flying blind. Reporting stopped being a status ritual nobody reads and became something decisions actually got made from — which kept the technical work and the business direction pointed the same way.

Bring this experience to your project

Use “Delivered analysis and regular progress reports” as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Dashboards and reports showing the handful of figures a decision actually turns on, refreshed without being asked.

Need engineering translated for the boardroom?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: Data Analyst. It draws on Data Analytics, Technical Leadership, Project Management, Product & Requirements and Stakeholder & Reporting. And while you are here, we are rather good at Data Analytics & BI Dashboards, Technical Leadership & Consulting and Project Management (Agile).
