Engineer

Designed a time-management and reporting system

Designed a time-management and reporting system that remained in production use for years without significant modification.

2015 – 2022

a reporting system that ran for years untouched

Situation. The team didn't have a dependable way to manage time and report progress. Which usually means it's happening in a scatter of spreadsheets and memory, and the reporting turns into a scramble at the end of each period rather than something that just falls out of how people work.

Task. Building a system for both that would actually last was the task.

Action. A time-management and reporting system was designed around how the team actually worked, rather than imposing some off-the-shelf process they'd route around. That's the whole trick with internal tools — if it fits the real workflow, people use it; if it fights the workflow, they quietly abandon it and you're back to spreadsheets. So it was built to match reality rather than an ideal.

Result. It stayed in production use for years without any significant modification. That's the compliment you want for an internal tool — not that it was impressive, but that it just kept working and nobody ever needed to replace it. Something that survives years of daily use untouched was clearly built to fit.

Bring this experience to your project

Use "Designed a time-management and reporting system" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Dashboards and reports showing the handful of figures a decision actually turns on, refreshed without being asked.

Need an internal tool that just keeps working?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: Process Automation Engineer. It draws on Automation & CI/CD, Technical Leadership, Project Management and Product & Requirements. And while you are here, we are rather good at Data Analytics & BI Dashboards, Project Management (Agile) and Product Strategy & Requirements.
