Engineer

Diagnosed and repaired laptop hardware

Diagnosed and repaired laptop hardware — screens, hinges, keyboards, trackpads, motherboards and power — and resolved software issues across Linux, Windows and Mac.

2003 – 2014

laptops repaired, and the software behind them

Situation. Laptops came in with the full range of things that go wrong with laptops — cracked screens, broken hinges, dead keyboards, failing trackpads, motherboard faults, power problems — plus the software side, across Linux, Windows and Mac. Basically, whatever was wrong with it, it landed on the bench.

Task. Diagnosing and fixing them reliably was the job — reliably being the operative word, because a laptop repair that doesn't hold is just a delayed second visit.

Action. The hardware was repaired end to end — screens, hinges, keyboards, trackpads, motherboards, power — which at the motherboard level is genuinely fiddly, close work, and the software problems resolved across all three operating systems. The diagnosis is usually the real skill: a laptop that won't power on could be the charger, the board, or the battery, and the repair is only as good as the guess about what's actually broken. So the care went into finding the real fault before touching anything.

Result. Machines went back to their owners working and dependable, hardware and software both sorted. A repair that holds up is the only kind worth doing, and getting the diagnosis right first is what made these hold.

Bring this experience to your project

Use "Diagnosed and repaired laptop hardware" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. The laptop, the printer, the login and the mailbox, sorted quickly and in plain language, without anyone feeling foolish.
