Engineer

Engineered 600 PL/pgSQL ETL/ELT pipelines

Engineered 600 PL/pgSQL-based ETL/ELT pipelines to streamline complex data processing workflows across multiple PostgreSQL development and production environments.

2022 – 2024

600

ETL pipelines engineered in PL/pgSQL

Situation. The organization was managing large volumes of transactional and analytical data across multiple PostgreSQL development and production environments. The existing data pipelines were fragmented, lacked consistency, and were causing performance bottlenecks, leading to delays in business-critical reporting and decision-making.

Task. The task was to design and implement robust, scalable, and efficient ETL/ELT pipelines using PL/pgSQL to streamline complex data ingestion, transformation, and loading workflows. A key objective was to improve query performance and ensure data integrity across all environments.

Action. Over 600 PL/pgSQL-based ETL/ELT pipelines were engineered to automate the extraction, transformation, and loading of data from various sources. Key technical implementations included:

- Leveraged partitioned tables and materialized views to optimize read performance for large datasets.
- Applied primary and foreign key constraints to maintain referential integrity during transformations.
- Designed unique and composite indexes to speed up JOIN operations and complex filtering criteria.
- Incorporated exception handling and transactional control to ensure fault tolerance and rollback in case of failures.

- Enabled incremental loads using change data capture (CDC) mechanisms and timestamp-based deltas.
- Developed automated logging and auditing procedures to track pipeline execution, monitor anomalies, and facilitate debugging.

Result. The achievement record reports 600 PL/pgSQL ETL/ELT pipelines across PostgreSQL development and production environments. The delivered work includes transformation logic, constraints, incremental loading and execution logging. Performance and data-quality improvements were objectives; no comparative benchmark or error-rate calculation is established by this record.

Bring this experience to your project

Use “Engineered 600 PL/pgSQL ETL/ELT pipelines” as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Somebody responsible for the thing the whole company rests on: it is up, it is backed up, and it is not quietly rotting.
