Engineer

Integrated a company-wide password manager

Integrated a company-wide password-management system, strengthening security and streamlining access control.

2015 – 2022

one password system for the whole company

Situation. Credentials were being handled inconsistently — different people storing and sharing them in different, ad-hoc ways — and that inconsistency is itself the security risk. It's rarely a dramatic breach; it's a password in a chat message, a shared login nobody rotates, the slow accumulation of small exposures.

Task. Centralising the credentials and making them secure was the task.

Action. A company-wide password-management system went in, so there was one consistent, secure way credentials got stored and shared instead of everyone's personal habit. The value of company-wide is exactly that it's not optional per person — a password manager only half the team uses barely helps, because the risk lives in the half that didn't. So the point was to make the secure way the default way, everywhere.

Result. Credential storage and sharing were centralised under common access controls, reducing ad-hoc handling and making access rules more consistent across the organisation.

Bring this experience to your project

Use "Integrated a company-wide password manager" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Day-to-day care of servers, mail, accounts and updates, so the things everybody relies on stay boring.

Need password and access management sorted?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: Infrastructure Engineer. It draws on Infrastructure, Automation & CI/CD, Security and System Administration. And while you are here, we are rather good at System Administration and Security & Access Management.
