Engineer

Made a geographical data pipeline 50x faster

Recorded a 50x geographical data-pipeline improvement in the founder's Utiligize work through SQL and data-model changes across PostgreSQL, MS SQL and Google Cloud BigQuery.

2022 – 2024

50x

faster geographical data pipelines

Situation. The organization faced significant delays in processing large sets of geographical data, which affected the efficiency of data-driven decision-making processes and analytical reporting.

Task. The objective was to optimize the geographical data pipeline to enhance performance and reduce processing time, ensuring that data analytics could be performed more effectively and in real-time.

Action. The existing SQL programming and data modeling structures across PostgreSQL, MS SQL, and Google Cloud BigQuery were meticulously analyzed, which surfaced bottlenecks related to inefficient indexing strategies, suboptimal query designs, and lack of appropriate constraints. To address these issues:

- The data models were redesigned to normalize critical datasets, with partitioning strategies implemented to improve data retrieval times.
- Applied advanced indexing techniques, including B-tree and GiST indexes for PostgreSQL, filtered indexes in MS SQL, and clustering in BigQuery.
- Optimized complex SQL queries by refactoring subqueries, reducing join operations, and incorporating materialized views where relevant.
- Established data integrity constraints such as foreign keys and check constraints to ensure data consistency without compromising performance.

Result. The founder's achievement record reports a 50x improvement for the geographical data pipeline in this engagement. That is the recorded project result, rather than a guarantee for other datasets or systems. The published record does not specify the benchmark dataset, hardware or comparison procedure.

Bring this experience to your project

Use "Made a geographical data pipeline 50x faster" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Anything that happens in a place — vessels, vehicles, plots, sensors — put on a map you can search, measure and share.
