Engineer

Managed 4,000 computer repairs

Managed 4,000 computer repairs, ensuring rapid and effective resolution of hardware and software issues.

2003 – 2014

4,000

computer repairs seen through

Situation. There was a constant stream of computer repairs coming through — four thousand of them over time — and every one was someone waiting to get their machine back and get on with their day. Hardware faults, software faults, the whole mix, and clients judged the shop on how fast and how properly they got fixed.

Task. Managing those repairs was the job — keeping problems getting resolved quickly and, just as importantly, correctly.

Action. Four thousand computer repairs went through — diagnosing the hardware and software faults, organising the workflow so machines moved through instead of piling up, and holding the quality so a repair was actually done right rather than sent back out to fail again next week. A repair that comes back is worse than a slow one; it costs the client a second trip and costs the shop the trust. So the throughput mattered, but never at the expense of fixing it the first time.

Result. All four thousand got resolved, and quickly. People got their machines back working and got on with things, and the company's name for dependable service held up — which in a repair shop is the whole business.

Bring this experience to your project

Use "Managed 4,000 computer repairs" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. The laptop, the printer, the login and the mailbox, sorted quickly and in plain language, without anyone feeling foolish.

Hardware trouble piling up?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: System Administrator / IT Consultant. It draws on Project Management and System Administration. And while you are here, we are rather good at IT Support & Helpdesk and Hardware Repair & Data Recovery.
